

News from Grade 5 Science:

Mrs. Croteau and her student scientists would like to share that on October 13, 2016 the Fifth grade students at Horace W. Porter School had an amazing opportunity to experience the QMC Mobile STEM lab. This non-traditional classroom provided students with a unique setting in which to explore science, technology, engineering and math. Together with the nature trail, and water sources on site, student scientists used the latest technology to explore some challenging questions about water quality and biodiversity. These hands-on activities required students to perform data analysis as well as form and test hypotheses and problem solve. We thoroughly enjoyed this engaging experience and would like to thank all those that were involved for their support!
